You'll find physical therapy recommendations on our website for many of these health conditions and functional impairments. In our Community Q&A, we're also looking for physical therapy recommendations for those with some of the major health conditions that are not on the list. If you have another physical therapy recommendation for these conditions or would like to share it with us, contact us at [ContactUs@DisabilityAccess.org](mailto:ContactUs@DisabilityAccess.org) and we'll add it to the list. Recommendations for Other Medical Conditions in COVID-19 Safety Precautions: Recommendations for Other Medical Conditions in COVID-19 Safety Precautions If you have a medical condition not listed above, we recommend that you follow the general guidelines on preventing the spread of the coronavirus. This will help you stay healthy, maintain your mobility, and keep your overall wellbeing. Please remember that if you have symptoms, you should see your healthcare provider immediately. If you have any questions about coronavirus and your medical condition, please contact your healthcare provider. COPD/Emphysema Keep your distance and use precautions. You are considered to be at high risk for this health condition because of your age, underlying lung disease, and lung damage. You may want to be extra cautious when breathing as you're more likely to develop a serious lung infection like the coronavirus. Also, smoking is not good for your lung health, and quitting smoking will help you to prevent respiratory illness. See a doctor if you have a cough that lasts more than two weeks, or if your cough gets worse when you breathe. Learn more about COVID-19 and COPD/Emphysema. If you have COPD/Emphysema, we recommend that you practice social distancing to prevent you from being in contact with anyone who is at high risk for coronavirus. Lung Cancer See your healthcare provider if you are experiencing a cough, and you have a medical history of lung cancer. You may also be at a high risk of coronavirus if you have a chronic medical condition, including lung cancer, diabetes, and heart disease. Learn more about COVID-19 and Lung Cancer. Crohn's Disease Keep your distance and use precautions. You are considered to be at high risk for this health condition because of your age and any underlying health conditions. You may want to be extra cautious when breathing as you
